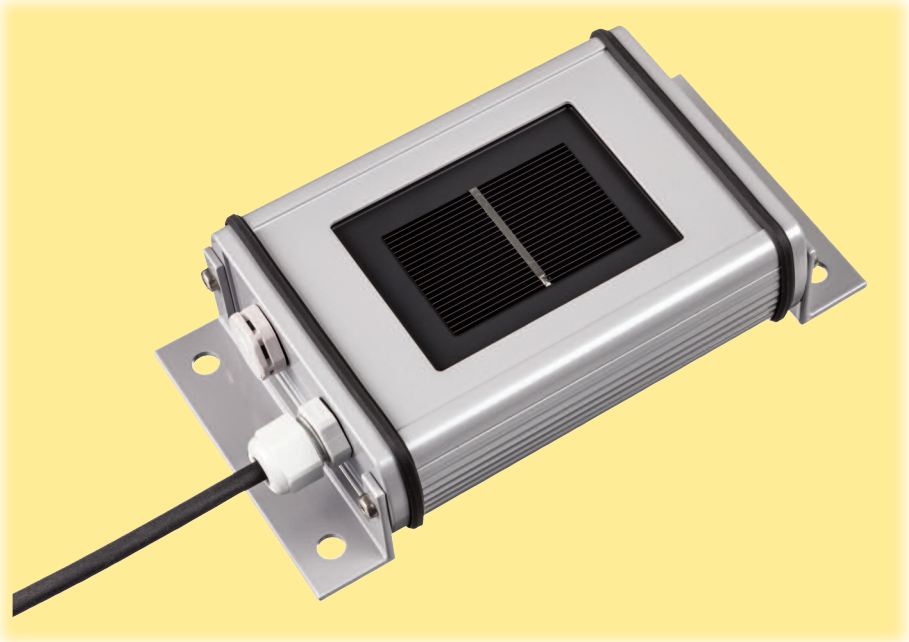
SILICON IRRADIANCE SENSOR

Measurement of Solar Irradiance

Silicon irradiance sensors (Si sensor) show a cost-effective, but rugged and reliable solution for the measurement of solar irradiance, especially for the monitoring of Photovoltaic (PV) systems. Based on the construction of the sensor element corresponding to a PV module they are ideal as reference for the monitoring of PV systems. Especially the spectral response comparable to PV modules as well as the similar inclination error (incident angle modifier) allow an exact analysis of PV energy yields using Si sensor data.



General Information

Mode of Operation

A silicon solar cell can be used as an irradiance sensor, because the short-circuit current is proportional to the irradiance. Our sensors are build out of a monocrystalline Si solar cell connected to a shunt. Due to the low resistance of the shunt the cell operates next to short-circuit.

To minimize influences of temperature to the measuring signal all of our sensors with the extension „TC“ have an active temperature compensation via a temperature sensor laminated to the back surface of the solar cell.

All sensors are calibrated in artificial sunlight against a reference cell calibrated at the Physikalisch-Technische Bundesanstalt (PTB, National Metrology Institute of Germany).

Mechanical Construction

The solar cell is embedded in Ethylen-Vinyl-Acetat (EVA) between glass and Tedlar. The laminated cell is integrated into a case of powder-coated aluminium. Therefore the sensor construction is comparable to that of a standard PV module. The electrical connection is realized by a 3 m cable or a waterproof (IP67) connector.

Optional Temperature Measurement

Additionally to the irradiance measurement our silicon sensors with the extension “-T” are able to measure the temperature of the solar cell using a temperature sensor laminated to the back of the cell. This solar cell temperature can approximately be used as module temperature.

SILICON IRRADIANCE SENSOR

Technical Data

SI-SENSOR
General Information

- Solar cell: Monocrystalline silicon (50 mm x 33 mm)
- Operating temperature: -35°C to 80°C
- Electrical connection: 3 m shielded cable
- Load impedance for Si-V-1.5TC-batt: minimal 1 MΩ
- Load impedance for Si-V-1.5TC(-T), Si-V-10TC(-T): min. 10 kΩ
- Load impedance for Si-I-420TC(-T): minimal 20 Ω and maximal 400 Ω
- Case, protection mode: Powder-coated aluminium, IP 65
- Dimension, weight: 155 mm x 85 mm x 39 mm, approx. 350 to 470 g
- Customs number for all sensors: 85 41 40 90

Digital

- Protocol: M&T (type -MT), MODBUS RTU (type -MB)
- Interface: RS485 up to 38.4 kBaud
- Galvanic isolation: 1.000 V between power supply and bus

ACCESSORIES FOR Si-RS485TC-2T-v

- **Tamb-Si**, Ambient temperature sensor in stainless steel sleeve with 3 m cable and connector (IP67), measuring range: -40 to +90°C
- **Tmodul-Si**, Module temperature sensor in aluminium block with 3 m cable and connector (IP67), measuring range: -40 to +90°C
- **Vwind-Si**, Wind speed sensor with 5 m cable and connector (IP67), measuring range: 0.9 to 40 m/s

EXTEND OF SUPPLY

- Silicon sensor with shielded cable, 0.14 mm², UV- and temperature resistant, 3m length and ferrules (except Si-V-1.5TC-batt)
- Mignon cells not included
- Calibration protocol and quick reference guide

Options

- DaKKS calibration certificate
- Customized cable lengths
- Version with waterproof connector (Si-V-1.5TC-batt always with connector)
- Adaptation of spectral response to different PV materials
- Customised scaling or measuring range

SILICON IRRADIANCE SENSOR

Option Connector

ELECTRICAL CONNECTION

Optional Version with Connectors

The electrical connection of the Si sensor is realized with the inbuilt connector and the suitable plug.

Technical Data of the Plug

- Cable dimensions (best / max.): 0.14 mm² / 0.25 mm² (AWG26 / AWG24)
- Diameter of cable: 3.5 … 5 mm
- Protection mode: IP67 in conjunction with the suitable connector

The connection of the different Silicon irradiance sensors are listed in the following table. The pin numbers are printed at the inside of the plug. Please take care of the mounting of the plugs as shown at the end of this page. Only if these mounting steps are realised the plug meets IP67 when connected.
